

FindRack

Catastrophic

1. None

Major

1. Add quick button to go to favorites from listview screen or add some confirmation that a rack has been favorited.
2. Text field on home screen should repopulate if you click away from the field.
3. Make it more obvious that the different racks are clickable.

Minor

1. Implement the menu button or make some dialog that says coming soon.
2. Have imageview reset to first image when you leave the page.
3. When you are viewing the images of a bike rack it might be nice to keep the button view images, but instead have it say “back to map” or something so that the user does not need to move their thumb to the top left to go back, because there are no other options once they reach this screen. If not that maybe a ‘set destination’ button that would open it in the maps application.
4. Provide a single line of instructions to help users understand that clicking anywhere in a given row will open the map view for that item.
 - a. **FIXED (added instructions)**
5. Make favorites disappear immediately when they are unchecked on the favorites page.
6. Radio buttons move when looking through images and images are not all the same size.
 - a. **FIXED (made all images same size)**
7. Home button accessible on each page.
8. Disable searching if there is nothing in the “Search” box

Cosmetic

1. The white and grey table seems a bit out of place amongst the blue background.
2. Minor issues when resizing window.

- a. FIXED (disabled resizing)**
- 3. Columns can be rearranged and this shouldn't be possible.
 - a. FIXED**
- 4. Checkboxes move when you click on them.
 - a. FIXED**
- 5. Add titles on mapview and imageview pages.
- 6. Continuing on the home screen, I found the 'OR's unnecessary because the buttons indicate that you can pick any option already. I think that you can safely remove those.
- 7. Maps do not change when choosing different racks.
